

Ex.No.3-Scenario-Based Report Development Utilizing Diverse Prompting Techniques for the the following Prompt Engineering types with examples - Straightforward Prompts - Tabular Format Prompting - Missing Word Prompting - Preceding Question Prompting.

Aim:

To write the prompts for these following prompt types and evaluate that using any one method
1. Straightforward Prompts, 2. Tabular Format Prompting 3.Preceding Question Prompting and
4. Missing Word

Procedure:

Prompting

1. Straightforward Prompts

Prompt:

"Provide the steps to troubleshoot when my washing machine is not turning on."

ChatGPT:

Check if the power cord is plugged in.

Ensure the switch and circuit breaker are working.

Verify the washing machine door is closed properly.

Try resetting the machine if it has a reset button.

If the issue persists, contact service support.

Gemini:

Make sure the machine is connected to power.

Confirm the socket is working by testing with another device.

Restart or unplug and plug back the machine.

Call customer service if still not working.

2. Tabular Format Prompting

Prompt:

"Provide a table comparing warranty support vs. non-warranty support for our products."

ChatGPT:

Feature	Warranty Support	Non-Warranty Support	Repair Cost	Free or minimal (covered)	Paid by customer	Parts Replacement	Free if covered in warranty	Paid replacement	Service Time	Priority support	Standard queue
---------	------------------	----------------------	-------------	---------------------------	------------------	-------------------	-----------------------------	------------------	--------------	------------------	----------------

Gemini:

Feature	Warranty Support	Non-Warranty Support	Repair Cost	Covered (no extra pay)	Customer pays	Service Time	Faster	Normal waiting time	3. Preceding Question	Prompting
---------	------------------	----------------------	-------------	------------------------	---------------	--------------	--------	---------------------	-----------------------	-----------

Prompt:

"Why might my order be delayed? Explain how shipping partners affect delivery time."

ChatGPT:

Order delays can occur due to stock availability, address verification, or courier backlogs.	Shipping partners may experience delays due to traffic, bad weather, or overloaded logistics networks. These factors extend the delivery time beyond the expected date.
--	---

Gemini:

Your order can be delayed because of sellers, packaging issues, or couriers. Delivery partners may face weather problems or longer routes, which slows down delivery.

4. Missing Word Prompting

Prompt:

"If your order status shows 'In Transit', it means your package is currently ____."

ChatGPT:

"on the way to your delivery address."

Gemini:

"moving through the courier network."

Evaluation Metrics: Accuracy and Efficiency

Prompt Type	ChatGPT Accuracy	ChatGPT Efficiency	Gemini Accuracy	Gemini Efficiency
Straightforward Prompts	5/5 (Detailed and stepwise explanation)	4/5 (Slightly wordy)	4/5 (Correct but less detailed)	5/5 (Short and quick response)
Tabular Format Prompting	5/5 (Well-structured and complete table)	4/5 (Takes slightly longer to read)	4/5 (Simpler but missing some details)	5/5 (Compact and efficient table)
Preceding Question Prompt	5/5 (Clearly explains causes and courier role)	4/5 (Somewhat lengthy response)	4/5 (Correct but less explanatory)	5/5 (Concise and to the point)
Missing Word Prompting	5/5 (Precise and customer-friendly output)	5/5 (Highly efficient and direct)	4/5 (Correct but less natural phrasing)	4/5 (Less smooth response)

Result

The experiment was successfully executed using four prompting techniques with ChatGPT and Gemini.

Both tools generated meaningful responses, and their performance was evaluated based on accuracy and efficiency.
